Absolutely. Below is the **complete single-block version**. You can copy everything inside the block into Word/Google Docs and **Save/Export as PDF**.

INDIAN SHARE MARKET
RAG KNOWLEDGE BASE

India-Focused Raw Knowledge Source for a Retrieval-Augmented Generation (RAG) Chatbot

DOCUMENT PURPOSE
This document is designed as a structured knowledge source for an India-focused share-market chatbot. It contains definitions, concepts, terminology, market institutions, investment products, risks, investor protection information, and RAG-specific answering rules.

IMPORTANT DISCLAIMER
This document is for educational and informational purposes only. It is not personalized investment, trading, financial, legal, or tax advice. Stock-market investments involve risk and returns are not guaranteed. Current stock prices, market timings, taxes, regulations, IPO information, corporate actions, settlement cycles, and other time-sensitive information must be verified using current authoritative sources.

JURISDICTION
India

==========
CHUNK 001 — INDIAN SHARE MARKET OVERVIEW
==========

The Indian securities market is a marketplace where investors buy and sell financial securities.

Major securities-market instruments include:

1. Equity shares
2. Debt securities
3. Mutual funds
4. Exchange Traded Funds (ETFs)
5. Futures and options
6. Government securities
7. Real Estate Investment Trusts (REITs)
8. Infrastructure Investment Trusts (InvITs)

The Indian securities market has two major segments:

Primary Market:

The primary market is where new securities are issued or offered to investors. Examples include Initial Public Offerings (IPOs), rights issues and certain debt issues.

Secondary Market:
The secondary market is where already-issued securities are bought and sold among investors.

SEBI, the Securities and Exchange Board of India, is the principal regulator of India's securities market. Its responsibilities include investor protection, market development and regulation of the securities market.

KEYWORDS:
Indian stock market, securities market, primary market, secondary market, SEBI, equity, IPO, securities

==========
CHUNK 002 — MAJOR INDIAN MARKET INSTITUTIONS
==========

SEBI:
SEBI stands for Securities and Exchange Board of India. It regulates India's securities market and works toward investor protection, market development and regulation.

NSE:
NSE stands for National Stock Exchange of India. It is a major recognized stock exchange in India.

BSE:
BSE Ltd. is one of India's major recognized stock exchanges.

NSDL:
NSDL stands for National Securities Depository Limited. It is a recognized securities depository in India.

CDSL:
CDSL stands for Central Depository Services (India) Limited. It is a recognized securities depository in India.

Depository Participant:
A Depository Participant, commonly called a DP, is an intermediary through which investors access depository services and hold securities electronically.

Stock Broker:

A stock broker is an intermediary that provides investors access to trading facilities on recognized stock exchanges.

Registrar and Transfer Agent:
An RTA handles investor records and services related to securities, transfers and corporate actions.

KEYWORDS:
SEBI, NSE, BSE, NSDL, CDSL, DP, depository participant, broker, RTA

==========
CHUNK 003 — DEMAT, TRADING AND BANK ACCOUNTS
==========

A typical Indian securities-market investor uses three types of accounts:

Bank Account:
Used for making and receiving payments.

Trading Account:
Used to place buy and sell orders through a stock broker.

Demat Account:
Used to hold securities in electronic form.

KYC:
KYC means Know Your Customer. It is part of the applicable investor onboarding and verification process.

Investors should verify that brokers, investment advisers and other securities-market intermediaries are properly registered or authorized where applicable.

A demat account does not itself execute trades. The trading account is generally used to place orders, while the demat account holds securities electronically after settlement.

KEYWORDS:
demat account, trading account, bank account, KYC, broker, securities

==========
CHUNK 004 — EQUITY SHARES
==========

An equity share represents ownership in a company.

An equity shareholder may benefit from:

1. Capital appreciation
2. Dividends, when declared by the company

Capital appreciation occurs when the market value of a share increases.

Example:

If an investor buys a share at ₹100 and later sells it at ₹130, the price appreciation is ₹30 per share before considering taxes, charges and other costs.

Equity investment does not guarantee returns.

Share prices may change because of:

- Company performance
- Earnings
- Future growth expectations
- Economic conditions
- Interest rates
- Industry conditions
- Government policies
- Corporate announcements
- Market sentiment
- Global events

Market Capitalization:

Market Capitalization = Current Share Price × Number of Outstanding Shares

KEYWORDS:
equity, shares, shareholder, capital appreciation, dividend, market capitalization

==========
CHUNK 005 — STOCK PRICE AND MARKET TERMINOLOGY
==========

OPEN:
The first traded price of a security during a trading session according to the applicable exchange methodology.

HIGH:
The highest traded price during a trading session.

LOW:
The lowest traded price during a trading session.

CLOSE:
The closing price determined according to the applicable exchange methodology.

VOLUME:
The quantity of shares or contracts traded.

TURNOVER:
The monetary value of transactions.

BID PRICE:
The price at which buyers are willing to buy.

ASK PRICE:
The price at which sellers are willing to sell.

BID-ASK SPREAD:
The difference between the best available ask price and bid price.

LIQUIDITY:
The ability to buy or sell an asset relatively easily without causing a large price impact.

VOLATILITY:
The degree to which a security's price fluctuates over time.

BULL MARKET:
A market environment broadly characterized by rising prices and positive sentiment.

BEAR MARKET:
A market environment broadly characterized by falling prices and negative sentiment.

PRICE BAND / CIRCUIT LIMIT:
An exchange mechanism that can restrict price movement in specified securities or circumstances.

KEYWORDS:
open, high, low, close, volume, turnover, bid, ask, liquidity, volatility, bull market, bear market

==========
CHUNK 006 — INDIAN MARKET INDICES
==========

An index is a statistical measure designed to represent the performance of a selected group of securities.

NIFTY 50:
Nifty 50 is a major NSE benchmark index representing 50 companies according to its index methodology.

SENSEX:
S&P BSE Sensex is a major BSE benchmark index representing 30 companies according to its index methodology.

SECTORAL INDEX:
A sectoral index represents companies from a particular sector.

Examples of sectors include:

- Banking
- Information Technology
- Healthcare
- Automobile
- Financial Services
- Energy

Indexes are used as market benchmarks.

Index funds and ETFs may seek to track the performance of an index.

Index performance does not guarantee future investment returns.

KEYWORDS:
Nifty 50, Sensex, NSE, BSE, index, benchmark, sectoral index

==========
CHUNK 007 — PRIMARY MARKET AND IPO
==========

IPO stands for Initial Public Offering.

An IPO is a public issue through which shares are offered to public investors as part of the company's initial public offering and listing process.

PRIMARY MARKET:
The market where new securities are issued or offered.

SECONDARY MARKET:
The market where existing securities are traded among investors.

BOOK BUILDING:
Book building is a price-discovery process in which investor bids are collected within an indicated price range.

ASBA:
ASBA stands for Application Supported by Blocked Amount.

Under ASBA, the application amount for certain public issues is blocked in the investor's bank account rather than immediately transferred to the issuer.

IPO ALLOTMENT:
IPO allotment is the process of allocating shares to eligible applicants according to the issue rules and available demand.

IPO RISKS:
IPO investments may involve:

- Valuation risk
- Business risk
- Market risk
- Listing-price volatility
- Liquidity risk
- Loss of capital

KEYWORDS:
IPO, initial public offering, primary market, book building, ASBA, allotment

==========
CHUNK 008 — CORPORATE ACTIONS
==========

DIVIDEND:
A dividend is a distribution made by a company to eligible shareholders according to the company's declaration and applicable rules.

BONUS ISSUE:
A bonus issue provides additional shares to existing eligible shareholders without requiring a separate payment, subject to applicable terms.

RIGHTS ISSUE:
A rights issue offers additional shares to existing eligible shareholders on specified terms.

STOCK SPLIT:
A stock split increases the number of shares while proportionately reducing the face value per share.

BUYBACK:
A buyback is a process through which a company repurchases its own shares according to applicable rules.

DIVIDEND YIELD:

Dividend Yield =
Annual Dividend Per Share / Current Market Price Per Share × 100

Corporate actions can affect:

- Number of shares
- Share price
- Ownership percentages
- Cash flows
- Valuation metrics

Historical price data may be adjusted by data providers for certain corporate actions.

KEYWORDS:
dividend, bonus, rights issue, stock split, buyback, corporate action

==========
CHUNK 009 — FUNDAMENTAL ANALYSIS
==========

Fundamental analysis evaluates a company's business and financial condition.

Factors may include:

- Revenue

- Profit
- Earnings
- Cash flow
- Debt
- Assets
- Management
- Competitive position
- Industry conditions
- Growth
- Valuation

COMMON FINANCIAL METRICS:

Revenue:
Income generated from business operations.

EBITDA:
Earnings Before Interest, Taxes, Depreciation and Amortization.

EBIT:
Earnings Before Interest and Taxes.

Net Profit:
Profit remaining after applicable expenses, interest and taxes.

EPS:
Earnings Per Share.

P/E RATIO:
Price-to-Earnings ratio.

P/E =
Market Price Per Share / Earnings Per Share

P/B RATIO:
Price-to-Book ratio.

ROE:
Return on Equity.

ROCE:
Return on Capital Employed.

DEBT-TO-EQUITY:

A leverage ratio comparing debt with shareholders' equity.

CURRENT RATIO:
A liquidity ratio comparing current assets with current liabilities.

FREE CASH FLOW:
Cash generated after relevant operating and capital expenditure requirements. The exact calculation can vary by analyst or data provider.

A low valuation ratio does not automatically mean that a stock is cheap or attractive.

Investors should consider:

- Business quality
- Growth
- Profitability
- Risk
- Industry conditions
- Competitors
- Historical valuation
- Cash flows

KEYWORDS:
fundamental analysis, revenue, EBITDA, EBIT, net profit, EPS, PE ratio, PB ratio, ROE, ROCE

==========
CHUNK 010 — TECHNICAL ANALYSIS
==========

Technical analysis studies historical price and volume information to identify trends, momentum and possible support or resistance levels.

CANDLESTICK:
A candlestick generally displays:

- Open
- High
- Low
- Close

SUPPORT:
A price area where buying interest has appeared historically.

RESISTANCE:
A price area where selling interest has appeared historically.

SMA:
Simple Moving Average.

EMA:
Exponential Moving Average.

RSI:
Relative Strength Index. RSI is a momentum indicator commonly measured on a scale from 0 to 100.

MACD:
Moving Average Convergence Divergence. MACD is a trend and momentum indicator based on moving averages.

VOLUME ANALYSIS:
Volume analysis examines trading activity along with price movements.

Technical indicators are not guaranteed predictors of future prices. They can produce false signals.

KEYWORDS:
technical analysis, candlestick, support, resistance, SMA, EMA, RSI, MACD, volume

==========
CHUNK 011 — ORDER TYPES
==========

MARKET ORDER:
An order intended to execute at the best available market price, subject to available liquidity.

LIMIT ORDER:
An order specifying the maximum acceptable price for a buy or the minimum acceptable price for a sell.

STOP-LOSS:
An order strategy intended to limit losses or protect a position when a specified trigger condition is reached.

STOP-LOSS LIMIT ORDER:
After the trigger condition is reached, the order becomes a limit order.

Important:
Order types, validity conditions and available trading products may vary by broker and exchange segment.

KEYWORDS:
market order, limit order, stop loss, order types, trading

==========
CHUNK 012 — DELIVERY AND INTRADAY TRADING
==========

DELIVERY TRADING:
Delivery trading generally refers to buying securities with an intention to hold them beyond the trading session. Securities are settled into the investor's demat account according to applicable settlement rules.

INTRADAY TRADING:
Intraday trading refers to opening and closing a position within the same trading session.

Intraday trading may involve margin or leverage depending on the product and broker.

Leverage can amplify:

- Profits
- Losses

Intraday trading can therefore involve substantial risk.

Settlement cycles and margin rules may change according to regulatory and exchange decisions.

KEYWORDS:
delivery, intraday, trading, margin, leverage, settlement

==========
CHUNK 013 — DERIVATIVES
==========

A derivative is a financial contract whose value is linked to an underlying asset or reference.

Major derivatives include:

1. Futures
2. Options

FUTURES:
A futures contract is a standardized agreement with specified contract terms for an underlying asset or index.

OPTIONS:
An option gives the buyer a right, but not an obligation, subject to the contract terms.

CALL OPTION:
A call option generally gives the buyer the right to buy the underlying at the strike price.

PUT OPTION:
A put option generally gives the buyer the right to sell the underlying at the strike price.

STRIKE PRICE:
The specified price at which the option right applies.

PREMIUM:
The price paid by an option buyer for the option contract.

EXPIRY:
The date or time at which the derivative contract expires according to its contract specification.

DERIVATIVE RISKS:
Derivatives can involve:

- Leverage
- Margin requirements
- Rapid price movements
- Substantial losses
- Complex risk management

An option buyer can lose the premium paid.

Option sellers can face substantially larger or potentially very large losses depending on the position and risk controls.

KEYWORDS:
derivatives, futures, options, call, put, strike price, premium, expiry, F&O

==========
CHUNK 014 — MUTUAL FUNDS AND ETFs
==========

MUTUAL FUND:
A mutual fund is a pooled investment vehicle that collects money from investors and invests according to a stated scheme objective.

NAV:
NAV stands for Net Asset Value per unit.

SIP:
SIP stands for Systematic Investment Plan. It is a method of investing a specified amount at regular intervals in a mutual fund scheme.

ETF:
ETF stands for Exchange Traded Fund.

An ETF is a pooled investment product traded on a stock exchange. It may track an index, commodity or another type of underlying exposure depending on the product.

DIRECT PLAN:
A mutual fund plan purchased directly from the fund house without a distributor, subject to applicable scheme structure and rules.

REGULAR PLAN:
A mutual fund plan distributed through an intermediary.

Mutual funds and ETFs can lose value. Past performance does not guarantee future returns.

KEYWORDS:
mutual fund, NAV, SIP, ETF, direct plan, regular plan

==========
CHUNK 015 — REITs AND INVITs
==========

REIT:
REIT stands for Real Estate Investment Trust.

A REIT provides an investment structure for income-generating real-estate assets.

InvIT:

InvIT stands for Infrastructure Investment Trust.

An InvIT provides an investment structure for infrastructure assets.

Listed REITs and InvITs can be traded in applicable market segments.

Their market prices and distributions can be affected by:

- Asset performance
- Interest rates
- Liquidity
- Regulation
- Economic conditions
- Market sentiment

KEYWORDS:
REIT, InvIT, real estate, infrastructure investment trust

==========
CHUNK 016 — TYPES OF INVESTMENT RISK
==========

MARKET RISK:
Risk of loss resulting from changes in market prices.

BUSINESS RISK:
Risk arising from adverse developments in a company's business.

CREDIT / DEFAULT RISK:
Risk that an issuer or counterparty fails to meet its obligations.

LIQUIDITY RISK:
Risk that an investment cannot be sold quickly at a reasonable price.

VOLATILITY RISK:
Risk resulting from significant price fluctuations.

INTEREST-RATE RISK:
Risk that changes in interest rates affect the value of an investment.

CURRENCY RISK:
Risk resulting from exchange-rate movements.

CONCENTRATION RISK:
Risk arising from excessive exposure to one security, company, sector or asset class.

OPERATIONAL RISK:
Risk resulting from failures in systems, processes or operations.

Diversification can reduce some forms of risk but cannot eliminate investment risk.

KEYWORDS:
market risk, business risk, credit risk, liquidity risk, volatility, interest rate, diversification

==========
CHUNK 017 — INVESTOR SAFETY AND FRAUD AWARENESS
==========

Investors should be careful about investment scams and unauthorized trading activities.

COMMON WARNING SIGNS:

1. Guaranteed returns
2. Unrealistically high returns
3. Pressure to invest immediately
4. Unsolicited stock tips
5. Requests to transfer money to personal accounts
6. Fake trading applications
7. Fake investment websites
8. Impersonation of SEBI, NSE, BSE or brokers
9. Pump-and-dump schemes
10. Unauthorized dabba trading
11. Requests for OTPs
12. Requests for passwords
13. Requests for remote computer or phone access

Investors should:

- Verify intermediaries
- Use official websites
- Check registration status
- Understand charges
- Read risk disclosures
- Avoid relying solely on social-media tips
- Never share passwords or OTPs

KEYWORDS:
investment fraud, stock scam, fake trading app, pump and dump, dabba trading, investor safety

==========
CHUNK 018 — INVESTOR GRIEVANCE REDRESSAL
==========

If an investor has a complaint, the investor should normally first approach the relevant:

- Stock broker
- Listed company
- Mutual fund
- Depository Participant
- Other securities-market intermediary

SEBI SCORES:
SCORES is a mechanism provided by SEBI for investor complaints against entities regulated by SEBI.

SMART ODR:
SMART ODR provides an online dispute-resolution framework for eligible securities-market disputes.

Investors should retain:

- Contract notes
- Account statements
- Transaction records
- Application records
- Emails
- Messages
- Relevant communications

KEYWORDS:
SCORES, SMART ODR, complaint, grievance, investor protection

==========
CHUNK 019 — TAXATION: HIGH-LEVEL KNOWLEDGE
==========

Securities transactions can have tax implications.

Depending on the security, transaction and investor circumstances, taxation may involve:

- Capital gains
- Dividends
- Securities Transaction Tax
- Other applicable taxes or charges

Short-term and long-term capital-gain treatment can differ.

Tax rules may depend on:

- Security type
- Transaction date
- Holding period
- Cost basis
- Investor status
- Applicable tax year
- Current legislation

Tax rates, exemptions, holding periods and other provisions can change.

A chatbot should NOT provide a definitive tax calculation without checking the current applicable law.

For current tax information, use the latest official Income Tax Department or Ministry of Finance information.

KEYWORDS:
capital gains, short term capital gain, long term capital gain, dividend tax, STT, income tax

==========
CHUNK 020 — TRADING COSTS AND CHARGES
==========

Possible securities-market transaction costs may include:

1. Brokerage
2. Securities Transaction Tax (STT)
3. Exchange transaction charges
4. SEBI turnover fees
5. GST
6. Stamp duty
7. Depository Participant charges

8. Other applicable charges

The exact charges depend on:

- Broker
- Security
- Transaction type
- Market segment
- Product
- Applicable regulations

Investors should check the broker's current tariff sheet and applicable exchange and regulatory charges.

KEYWORDS:
brokerage, STT, GST, stamp duty, exchange charges, DP charges, trading costs

==========
CHUNK 021 — MARKET HOURS AND HOLIDAYS
==========

Indian stock exchanges have defined trading sessions and market holidays.

Trading hours can differ according to:

- Exchange
- Market segment
- Product
- Special trading session
- Exchange announcements

Market holidays can change according to official exchange calendars.

IMPORTANT RAG RULE:

If a user asks:

"Is the Indian stock market open today?"

or

"What time does NSE open?"

the chatbot should retrieve current official NSE/BSE information instead of relying only on a static document.

KEYWORDS:
NSE timings, BSE timings, market hours, trading session, market holiday

==========
CHUNK 022 — SETTLEMENT
==========

Settlement is the process through which securities and funds are delivered between trading parties after a transaction.

The applicable settlement cycle depends on:

- Security
- Market segment
- Transaction type
- Exchange rules
- Clearing corporation procedures
- Regulatory requirements

Settlement cycles may change.

IMPORTANT RAG RULE:

For questions about the current settlement cycle, the chatbot should retrieve information from the relevant exchange, clearing corporation, depository or SEBI source.

KEYWORDS:
settlement, clearing, securities settlement, settlement cycle, clearing corporation

==========
CHUNK 023 — COMMON INVESTOR QUESTIONS
==========

QUESTION:
What is a share?

ANSWER:
A share is a unit representing ownership in a company.

QUESTION:
What is a demat account?

ANSWER:
A demat account is an electronic account used to hold securities.

QUESTION:
What is a trading account?

ANSWER:
A trading account is used to place buy and sell orders through a broker.

QUESTION:
What is Nifty 50?

ANSWER:
Nifty 50 is a major NSE benchmark index representing 50 companies according to its index methodology.

QUESTION:
What is Sensex?

ANSWER:
Sensex is a major BSE benchmark index representing 30 companies according to its index methodology.

QUESTION:
What is an IPO?

ANSWER:
IPO stands for Initial Public Offering. It is a public issue through which shares are offered to public investors as part of an initial public offering and listing process.

QUESTION:
What is a dividend?

ANSWER:
A dividend is a distribution made by a company to eligible shareholders when declared according to applicable rules.

QUESTION:
What is P/E?

ANSWER:

P/E stands for Price-to-Earnings ratio and is commonly calculated as market price per share divided by earnings per share.

QUESTION:
What is market capitalization?

ANSWER:
Market capitalization is generally calculated as current share price multiplied by outstanding shares.

QUESTION:
What is diversification?

ANSWER:
Diversification means spreading investments across different securities, sectors or asset classes to reduce concentration risk.

QUESTION:
Can stock-market returns be guaranteed?

ANSWER:
No. Stock-market investments involve risk and returns cannot be guaranteed.

KEYWORDS:
FAQ, stock market questions, beginner investor, share market basics

==========
CHUNK 024 — RAG CHATBOT ANSWERING RULES
==========

RULE 1:
Distinguish educational information from personalized investment advice.

RULE 2:
For current stock prices, retrieve current market data.

RULE 3:
For current Nifty or Sensex values, retrieve current exchange or reliable market data.

RULE 4:
For current IPO information, retrieve current official IPO/exchange information.

RULE 5:

For corporate actions, retrieve current exchange/company filings.

RULE 6:
For taxes, retrieve the latest applicable tax rules.

RULE 7:
For market timings and holidays, retrieve current NSE/BSE information.

RULE 8:
Prefer authoritative sources such as:

- SEBI
- SEBI Investor
- NSE
- BSE
- NSDL
- CDSL
- RBI
- Income Tax Department
- Ministry of Finance
- Official company filings

RULE 9:
Never invent:

- Stock prices
- Returns
- Financial ratios
- IPO allotment results
- Dividend announcements
- Regulatory rules
- Tax rates
- Market timings

RULE 10:
Clearly distinguish factual information from interpretation.

RULE 11:
Do not present predictions as guaranteed outcomes.

RULE 12:
Mention relevant risks when answering investment or trading questions.

RULE 13:

Use exact dates when discussing historical events or current market information.

RULE 14:
If information is unavailable, outdated or uncertain, clearly state that the chatbot cannot verify it.

RULE 15:
For "Should I buy this stock?" questions, the chatbot should provide educational analysis, relevant factors and risks rather than claiming certainty.

KEYWORDS:
RAG, chatbot, investment advice, current market data, financial chatbot, retrieval

==========
CHUNK 025 — RECOMMENDED RAG METADATA
==========

For every chunk stored in the vector database, the following metadata can be used:

topic:
Indian Share Market

jurisdiction:
India

subtopic:
Specific subject of the chunk

market_segment:
Equity / IPO / Derivatives / Mutual Fund / ETF / REIT / InvIT / General

instrument:
Specific financial instrument where applicable

regulator:
SEBI / NSE / BSE / RBI / Income Tax Department / Other

source_type:
Official / Educational / Company Filing / Market Data

source_url:
URL of the source

effective_date:

Date from which the information applies

last_verified:
Date on which the information was last checked

freshness:
Stable / Dynamic

risk_level:
Low / Medium / High

keywords:
Search terms related to the chunk

Example:

topic = Indian Share Market
subtopic = Demat Account
market_segment = Equity
regulator = SEBI
jurisdiction = India
source_type = Official
freshness = Stable
keywords = demat, trading account, NSDL, CDSL, KYC, DP

==========
CHUNK 026 — RAG CHUNKING RECOMMENDATION
==========

Recommended chunk size:

Approximately 300–700 words per chunk.

Each chunk should preferably represent one concept.

GOOD CHUNK:

Topic:
P/E Ratio

Content:
Definition of P/E, formula, interpretation, limitations and examples.

BAD CHUNK:

One large chunk containing:
P/E + IPO + derivatives + taxation + market timings + mutual funds.

For better retrieval, related concepts should be grouped while unrelated concepts should remain separate.

Recommended metadata:

chunk_id
topic
subtopic
market_segment
instrument
regulator
source
source_url
effective_date
last_verified
freshness
keywords
jurisdiction

For vector search, use both semantic embeddings and metadata filtering where possible.

KEYWORDS:
RAG chunking, embeddings, vector database, metadata, semantic search

==========
CHUNK 027 — AUTHORITATIVE SOURCE DIRECTORY
==========

SEBI:
https://www.sebi.gov.in/

SEBI INVESTOR:
https://investor.sebi.gov.in/

NSE:
https://www.nseindia.com/

NSE INVESTOR INFORMATION:

https://www.nseindia.com/static/invest/investors-home

NSE INVESTOR EDUCATION:
https://www.nseindia.com/static/invest/how-to-invest-in-capital-market

BSE:
https://www.bseindia.com/

NISM:
https://www.nism.ac.in/

For depository information:
Use official NSDL and CDSL websites.

For banking and monetary-policy information:
Use the official RBI website.

For current taxation:
Use the official Income Tax Department and Ministry of Finance websites.

For company-specific information:
Use official company investor-relations pages and official NSE/BSE filings.

SOURCE PRIORITY:

1. SEBI / SEBI Investor
2. NSE / BSE
3. NSDL / CDSL
4. RBI
5. Income Tax Department
6. Ministry of Finance
7. Official company filings
8. Reputable secondary sources when primary sources are unavailable

KEYWORDS:
SEBI, NSE, BSE, NSDL, CDSL, RBI, NISM, Income Tax Department

==========
CHUNK 028 — CURRENT DATA VS STATIC KNOWLEDGE
==========

STATIC KNOWLEDGE:

The following information can generally be stored in a long-term RAG knowledge base:

- Definitions
- Financial terminology
- General market concepts
- Fundamental-analysis concepts
- Technical-analysis concepts
- Basic investment risks
- Explanation of market institutions
- Explanation of IPOs
- Explanation of derivatives
- Explanation of mutual funds
- Investor-safety concepts

DYNAMIC INFORMATION:

The following should preferably be retrieved from live/current sources:

- Current stock prices
- Current Nifty/Sensex values
- Today's market status
- Market holidays
- Current IPO subscription status
- Current IPO allotment status
- Current corporate actions
- Current dividend announcements
- Current financial results
- Current tax rules
- Current SEBI regulations
- Current brokerage charges
- Current settlement rules
- Current company announcements

A RAG chatbot should combine:

STATIC RAG KNOWLEDGE
+
CURRENT WEB/API DATA

This architecture is more reliable than using a static document for time-sensitive market information.

KEYWORDS:
live market data, RAG, static knowledge, dynamic knowledge, stock API

==========
CHUNK 029 — EXAMPLE CHATBOT RESPONSE POLICY
==========

USER QUESTION:
"Should I buy XYZ stock?"

RECOMMENDED RESPONSE APPROACH:

1. Explain that a buy/sell decision depends on the investor's goals, time horizon and risk tolerance.
2. Retrieve current company information.
3. Retrieve current price and relevant valuation information.
4. Analyze revenue, profit, debt, cash flow and growth.
5. Compare valuation with relevant peers.
6. Identify major business and sector risks.
7. Clearly separate facts from interpretation.
8. Avoid guaranteeing future returns.
9. Encourage the user to make an informed decision or consult a qualified professional where appropriate.

USER QUESTION:
"What is the current price of Reliance?"

RECOMMENDED RESPONSE APPROACH:

Do not answer using an old static RAG document.

Retrieve current market data first.

USER QUESTION:
"What is P/E ratio?"

RECOMMENDED RESPONSE APPROACH:

Answer directly from the static RAG knowledge base because P/E is a relatively stable concept.

KEYWORDS:
buy stock, sell stock, current price, valuation, financial chatbot

==========

CHUNK 030 — FINAL KNOWLEDGE BASE PRINCIPLES
==========

The Indian share-market chatbot should follow these principles:

1. Accuracy over speculation.
2. Current data for current questions.
3. Official sources for regulatory information.
4. Clear distinction between facts and opinions.
5. No guaranteed-return claims.
6. No fabricated stock prices.
7. No fabricated financial ratios.
8. No fabricated IPO information.
9. Mention risks when relevant.
10. Use exact dates for time-sensitive information.
11. Clearly identify stale information.
12. Protect users from common financial scams.
13. Avoid presenting educational information as personalized financial advice.
14. Prefer primary sources.
15. Keep RAG chunks focused on one concept.

FINAL PURPOSE:

The chatbot should help users understand the Indian share market, financial terminology, investment products, market structure and investor safety while using current authoritative sources whenever the question requires up-to-date information.

END OF INDIAN SHARE MARKET RAG KNOWLEDGE BASE
